

Allergy Policy

Policy Written/Reviewed by	Fiona May
Date of Review	September 2026
Date of Next Review	September 2027

KEY CONTACTS	
Safeguarding Lead	Fiona May
Responsibility for 'Supporting pupils with medical needs and the administration of medication' policy	Fiona May and Rebecca Jones
Qualified First Aiders	Sherri Leppard, Joanne Skinner (Secondary) Miss Gough, Miss Ward (Primary)
Catering Staff	Dannielle Roots, Danielle Black Joanne Skinner, Chanelle Billingham, Aleshea Simmons, Marion Howard, Chris Norris, Scarlet Filmer

Policy Statement and Aims

The Rowans Academy is an inclusive community that welcomes and supports pupils with allergies. Our school is committed to promoting a whole school approach to health care, welfare and wellbeing and the safe management of those members of our school community who live with specific allergies. We believe that all allergies should be taken seriously and dealt with in a professional and appropriate way. By our actions we work proactively to:

- minimise the risk of exposure within the school setting
- encourage self-responsibility
- learn avoidance strategies
- have robust plans for an effective response to possible emergencies
- ensure inclusivity for all pupils
- ensure all staff are aware of those children with allergies to avoid contact or exposure

The Rowans consider what reasonable adjustments need to be made to enable these pupils to participate fully and safely in all aspects of school life. Risk assessments are carried out for everyday activities that may involve allergens, such as food classes, but also for any experiential lessons that may contain the use of allergens. In doing so, pupils' needs are considered to mitigate any risks.

What does Benedict's Law require?

Benedict's Law introduces a consistent national framework for allergy safety in schools. Core measures include:

- **Whole-school allergy policies** setting out how schools manage allergies and respond to emergencies
- **Staff training** so teachers and school staff can recognise and respond to anaphylaxis
- **Access to emergency adrenaline auto-injectors (AAIs)** where needed
- **Individual healthcare or allergy action plans** for pupils with diagnosed allergies
- **Improved communication and record-keeping** around allergies and allergic reactions

These measures aim to ensure that every school has the systems in place to respond quickly and effectively to allergic emergencies.

All stakeholders have a role in ensuring that allergy management is successful, as detailed below.

Governors

- Ensure the school's arrangements to identify and safeguard the wellbeing of pupils, because of their own or someone else's allergy, are robust and effective
- Ensure that the school provides appropriate training, information, instruction, induction and supervision on a regular basis to enable everyone to stay safe regarding allergies and their management. It is good practice to log all training and attendees.
- Ensure adequate resources for managing allergies are available
- Monitor the effectiveness of this Policy to ensure it remains fit for purpose

Leadership Team and Safeguarding Team

- Provide, as far as practicable, a safe and healthy environment in which people at risk of allergic reaction and anaphylaxis can participate equally in all aspects of school life and are not subject to bullying because of their condition

- Ensure all visitors, volunteers, work experience students, sub-contractors are made aware of the school's commitment to allergy management as part of Safeguarding
- Ensure that up-to-date allergy information for pupils is accessible to catering teams
- Ensure there is a workable School Emergency Plan in place that is known by all staff
- Ensure the school ask parents/carers to check medical details it holds for the child 3 times a year at Academic Induction Day and both Academic Review Days.
- Where the pupils has an Individual Healthcare Plan (IHP), ensure the involvement of healthcare and welfare professionals, teaching and catering staff, parents/carers and the pupil/ student in establishing IHPs.
- Encourage parents/carers to provide Allergy Action Plans (AAPs) completed and signed by a healthcare professional that can be kept with their medication with copies made available for all staff to access and help the school support the pupils
- Ensure effective communication of individual pupil medical needs to all staff and that they know how and where to check for updated information.
- Ensure there are enough trained staff to meet the statutory requirements and assessed needs, allowing for staff absences away from the school premises
- Ensure First Aid staff training includes anaphylaxis management, including awareness of triggers, anaphylaxis and first aid emergency procedures
- Ensure an adequate risk assessment is undertaken prior to any school trips, excursions or off-site extra curricula activities for pupils who have allergies
- Ensure records of pupils medically prescribed an AAI and its use are kept correctly
- Ensure pupils documentation and in date medication is kept correctly and safely
- Ensure best practice in the labelling of foodstuffs and their contents
- Ensure that breakfast club, breaktime snack and lunch that is provided is done so with any allergy needs catered for to avoid contact and exposure.

All Staff

- Complete appropriate anaphylaxis training and be confident to respond to an allergy emergency
- Are vigilant about allergies and anaphylaxis amongst their pupils in the classroom and around school, especially in dining areas
- Encourage self-responsibility and learned avoidance strategies amongst pupils living with allergies
- Help all pupils understand which foods are safe for those with allergies and how they can support other pupils with specific dietary needs to stay safe
- Intervene to support anti-bullying of pupils with the condition
- Be aware of the pupils in their care (including regular cover classes) who have known allergies as an allergic reaction could occur at any time, not just at breaks or mealtimes
- Any food-related activities must be supervised with due caution whilst following best practice for storing, preparing, cooking and serving food
- Any staff leading on a school trip must check that all pupils with medical conditions, including allergies, are carrying their medication (those unable to produce their required medication would not be able to attend the excursion)

- Staff leading a school trip or off-site extra curricula activity must ensure they carry all relevant emergency supplies with them and are aware of administration procedure for medication

Parents/Carers

- Are to notify the school of the pupils' allergies
- Inform the school of any changes as soon as known
- Talk with their child about allergy self-management, including what foods are safe and unsafe, how to read food labels, strategies for avoiding allergens, how to spot symptoms of allergy, how and when to tell an adult if experiencing an allergic reaction.
- Provide an AAP completed by a healthcare professional that can be kept with their medication and help the school support the pupils
- Contribute to the provision of an IHP in partnership with the school, and relevant healthcare professional, where required.
- Provide any other written medical documentation, instructions and medications as directed by a health professional.
- If you require it, meet with the Medicine lead to discuss any specific requirements relating to your child's allergy
- Be aware of the school Allergy Policy and any arrangements for managing children with allergies and at risk of anaphylaxis
- Communicate regularly with the school to support our ability to keep our children safe and act immediately in the event of an allergic reaction
- Provide appropriate in date medication (two AAIs) of the correct dosage and register their AAIs on the manufacturer's websites to receive text alerts for expiry dates, and replace as medicine expires
- Providing appropriate foods to be consumed by the child if necessary

Pupils with allergies (as age appropriate)

- Have a good awareness of their allergy and support the knowledge of peers in helping keep them safe
- Be proactive in the care and management of their food allergies and reactions and medication
- Be sure not to exchange food with others and take care to avoid any foods which may cause an allergic reaction
- Avoid eating anything with unknown ingredients
- Know where their medication is kept if they have an allergic reaction
- As soon as they suspect they are experiencing signs of allergic reaction, tell an adult

Supply, storage and care of medication

Medication is stored in a suitable container and clearly labelled with the pupil's name, at the appropriate temperature and protected from sunlight. The pupil's medication storage container should contain:

- Two AAIs i.e. EpiPen® or Jext®
- An up-to-date allergy action plan
- Antihistamine as tablets or syrup (if included on allergy action plan)

- Spoon if required
- Asthma inhaler (if included on allergy action plan).

It is the responsibility of the child's parents to ensure that the anaphylaxis kit is up-to-date and clearly labelled, however the School's First Aider will check medication kept at school on a termly basis and send a reminder to parents if medication is approaching expiry.

Disposal

AAIs are single use only and must be disposed of as sharps. Used AAIs can be given to ambulance paramedics on arrival or can be disposed of in a pre-ordered sharps bin. Sharps bins to be obtained from and disposed of by a clinical waste contractor/specialist collection service/ local authority (delete as appropriate).

The sharps bin is kept in the medical/welfare room.

Catering

The school's 3 week rolling menu is sent to parents to view in advance.

The School First Aider will inform the catering staff of pupils with food allergies, and update these as appropriate. School staff also support during lunch and break times when the pupils are accessing food, to ensure no contact with allergens is made.

Parents/carers are encouraged to meet with the school, upon joining and as needs change, to discuss their child's needs.

The school adheres to the following Department of Health guidance recommendations:

- Bottles, other drinks and lunch boxes provided by parents for pupils with food allergies should be clearly labelled with the name of the child for whom they are intended.
- The pupil is taught to also check with catering staff, before selecting their lunch choice.
- Food will not be given to primary school age food-allergic children without parental engagement and permission (e.g. birthday parties, food treats).
- Use of food in crafts, cooking classes, science experiments and special events (e.g. assemblies, cultural events) is considered and risk assessed depending on the allergies of particular children and their age.

Allergy awareness

The Rowans have a culture of allergy awareness and education. Where a whole school approach to allergy awareness supports all staff, children and parents to understand how allergens can affect people. There is a focus on the signs and symptoms, how to deal with allergic reactions to minimise risk.

Risk assessment

The Rowan's conducts a detailed individual risk assessment for all new joining pupils with allergies and any pupils newly diagnosed, to help identify any gaps in our systems and processes for keeping allergic children safe.

Training

Allergy training is provided for relevant staff and includes a basic understanding of allergic disease and its risks which include:

- Knowing the common allergens and triggers of allergy
- Spotting the signs and symptoms of an allergic reaction and anaphylaxis. Early recognition of symptoms is key, including knowing when to call for emergency services
- Administering emergency treatment (including AAIs) in the event of anaphylaxis
 - knowing how and when to administer the medication/device
- Measures to reduce the risk of a child having an allergic reaction e.g. allergen avoidance
- Knowing who is responsible for what
- Associated conditions e.g. asthma
- Managing Allergy Action Plans and ensuring these are up to date

Equal Opportunities

Our school is clear about the need to actively support pupils with medical conditions to participate in accessing the curriculum, school trips and visits, or in sporting activities, and not prevent them from doing so. The school will consider what reasonable adjustments need to be made to enable these pupils to participate fully and safely on school trips, visits and sporting activities.

Risk assessments will be carried out so that planning arrangements take account of any steps needed to ensure that pupils with allergies are included. In doing so, pupils, their parents and any relevant healthcare professionals will be consulted.

Complaints

Parents/carers with a complaint about their child's allergies should discuss these directly with a member of the safeguarding team in the first instance. If the issue cannot be resolved, the parent/carer will be directed to the school's complaint procedures.

Monitoring and Review Arrangements

This policy will be reviewed and approved by the Governors every year.

FIRST AID FOR ANAPHYLAXIS

Recognise the Signs of Anaphylaxis...

A Airways

- Persistent cough
- Hoarse voice
- Difficulty swallowing
- Swollen tongue

B Breathing

- Difficult or noisy breathing
- Wheeze or persistent cough

C Circulation

- Persistent dizziness
- Pale or floppy
- Suddenly sleepy
- Collapse/unconscious

An allergic reaction can escalate to anaphylaxis which is potentially life-threatening. Always consider anaphylaxis in a food-allergic person even if there are no signs of a rash, hives or swelling.

ANAPHYLAXIS: ACTIONS TO TAKE

If any one or more of the above ABC symptoms are present, take these steps.

1. Administer an Adrenaline Auto Injector (AAI) without delay

Inject the AAI into the top of the outer thigh. If you're in doubt that it is anaphylaxis but one or more ABC symptoms are present, give the AAI, it will not harm them.

2. Dial 999 and say anaphylaxis ('ana-fill-axis')

Stay with the person until the ambulance arrives. DO NOT let them stand up and walk around.

3. The person should lie down immediately

If the person is not already lying down, they should do so, with legs raised if possible. If breathing is difficult, allow them to sit. If they have vomited or feel sick, gently turn them on their side.

4. Inject a second AAI into the outer thigh if there are no signs of improvement after 5 minutes

If there is no sign of life, start CPR immediately until help arrives.

Please learn these steps. This is life-saving information.
You never know when you will need to act in an anaphylaxis emergency.

ANAPHYLAXIS

HOW TO USE EPIPEN AAIS

If you think someone is have an anaphylactic reaction,
give the AAI without delay. It will not harm them.

Always consider anaphylaxis in a food-allergic person even if there are no signs of a rash, hives or swelling.

1. Remove the blue safety cap

Grasp the EpiPen in your dominant hand and remove the blue safety cap by pulling straight up. Remember: Blue to the Sky, Orange to the Thigh!

2. Position the orange tip

Hold the EpiPen at 90°, approximately 10cm away from the leg, with the orange tip pointing towards the outer thigh.

3. Administer the EpiPen AAI

Jab the EpiPen firmly into the outer thigh at a right angle. Hold firmly for 3 seconds, before removing and safely discarding.

4. Once the EpiPen AAI has been administered call 999

Ask for an ambulance and say "ana-fill-axis".

5. Lie the person down with legs raised immediately

If the person is not already lying down, they should do so, with legs raised if possible.

If breathing is difficult, allow them to sit. If they have vomited or feel sick, gently turn them on their side.

6. If there are no signs of improvement after 5 minutes, use a second EpiPen AAI

The person should remain still and lying down until the ambulance arrives. Don't try to get up, even if you start to feel better.

7. Start CPR

If there are no signs of life, start CPR immediately until help arrives.

ANAPHYLAXIS

HOW TO USE JEXT AAIS

If you think someone is have an anaphylactic reaction,
give the AAI without delay. It will not harm them.

Always consider anaphylaxis in a food-allergic person even if there are no signs of a rash, hives or swelling.

1. Hold the Jext AAI in the hand you write with

Hold with your thumb closest to the yellow cap. Pull off the yellow cap with your other hand.

2. Place the black injector tip against the outer thigh

Hold the injector at a right angles (approx. 90°) to the thigh.

3. Push the black tip as hard as you can into the outer thigh

Wait until you hear a 'click' confirming the injection has started, then keep it pushed in. Hold the injector firmly in place against the thigh for 10 seconds (a slow count to 10) then remove. The black tip will extend automatically and hide the needle.

4. Massage the injection area for 10 seconds

5. Once the Jext AAI has been administered call 999

Ask for an ambulance and say "ana-fill-axis".

6. Lie the person down with legs raised immediately

If the person is not already lying down, they should do so, with legs raised if possible.

If breathing is difficult, allow them to sit. If they have vomited or feel sick, gently turn them on their side.

7. If there are no signs of improvement after 5 minutes, use a second Jext AAI

The person should remain still and lying down until the ambulance arrives. Don't try to get up, even if you start to feel better.

8. Start CPR

If there are no signs of life, start CPR immediately until help arrives.

Appendix III

Flowchart for Allergic Reaction without use of Adrenaline Auto-Injector.

Refer to the child's BSACI Allergy Action Plan if they have one and call for other staff help if needed

Appendix IV

Flowchart for Allergic Reaction with use of Adrenaline Auto-Injector.

Refer to the child's BSACI Allergy Action Plan if they have one and call for other staff help if needed

Appendix V

Information on allergies

The most common causes of food allergies relevant to this Policy are the fourteen food allergens:

- Cereals containing Gluten
- Celery
- Crustaceans
- Eggs
- Fish
- Soya
- Milk
- Nuts
- Peanuts
- Mustard
- Sesame Seeds
- Sulphur dioxide/Sulphites
- Lupin
- Molluscs

However, it is possible that any food has the potential to cause an allergic reaction. Contact with any food or materials containing a child's allergen has the potential to cause an allergic reaction for that child.

Latex, chemicals, medicines, grasses, pollen, weeds, trees, pets, insect venom and animal dander (shredded flakes of skin) can also cause allergic reactions.

Symptoms

Mild to moderate symptoms include:

- Swelling of the eyes, face and lips
- Runny or congested nose
- Raised itchy rash (hives), eczema flare, skin flushing
- Itchy mouth
- Stomach cramps, nausea, vomiting, diarrhoea

Severe symptoms include:

- Swollen tongue, hoarse voice or cry, difficulty swallowing and talking
- Chest tightness
- Breathing difficulties, persistent cough, wheeze
- Low blood pressure, feeling faint, collapse
